## **DETAILED ACTION**

### ***Response to Arguments***

1. The amendment filed on 04/22/2010 is acknowledged and entered by the examiner.

### ***Claim Status***

2. Claims 1, 3, 4, 6-11 and 20 are currently pending in the instant application. Claims 2, 5 and 12-19 have been canceled.

### ***Reasons for Allowance***

3. Claims 1, 3, 4, 6-11 and 20 are allowed over the prior art record.
4. The following is an examiner's statement of reasons for allowance:

The applicant's remarks, filed on 04/22/2010, have been carefully reviewed with updated search. Consequently, reasons for allowance of claims 1, 3, 4, 6-11 and 20 are set forth in according to the following:

**Karaoguz et al. (US PUB. 2002/0059434)** teaches a multi-mode controller in the device may be used to alternately poll different networks to determine whether the device is within the area of coverage of a network and to selectively establish communications with those networks.

**Lu et al. (US PAT. 6,694,134)** teaches a client computer program or software capable of being downloaded into an information processing device having access to a WLAN to enable the information processing device to communicate with telephones of private and public networks via the access point of the WLAN.

**Forte (US PAT. 7,162,020)** teaches a wireless connect unit connected between an enterprise private branch exchange (PBX) network and a public switched telephone network. The wireless connect unit preferably serves as a gateway between the PBX and one or more remote communication devices. The remote devices can be used as standard PBX office telephones for both inbound and outbound telephone calls.

**Bridgelall (US PAT. 7,039,027)** teaches a Mobile Station (MS) is able to vertically roam between two different networks, i.e. WWAN and WLAN where the WWAN includes the General Packet Radio System (GPRS) using the infrastructure of the existing Global System of Mobile communications.

Consider claim 1, the prior arts made of record, alone or in combination, fails to clearly teach or fairly suggest a wireless local area network (WLAN) for providing wireless telecommunications services to a multi-mode mobile station, said multi-mode mobile station being able to wirelessly communicate with a wireless wide area network (WWAN) when operating in a first wireless coverage area, said WWAN including a first data register that contains a first data record for said multi-mode mobile station, wherein said first data register is a home location register (HLR), said WLAN comprising: at least one wireless access point providing a second wireless coverage area, said multi-mode mobile station being able to wirelessly communicate with said at least one wireless

access point when said multi-mode mobile station operates in said second wireless coverage area; a private branch exchange (PBX) communicatively coupled to said at least one wireless access point; and a second data register co-located with said PBX and communicatively coupled to said first data register, wherein said second data register stores a second data record for said multi-mode mobile station when said multi-mode mobile station operates in said second wireless coverage area, said second data register being configured to transmit at least one mobility management message to said first data register, whereby said at least one mobility management message facilitates roaming between said first and second wireless coverage areas by said multi-mode mobile station, as specified in the independent claim 1, and further limitations of their respective dependent claims 3, 4, 6-11 and 20.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
